

The supplemental material for “The Econometrics of the Hodrick-Prescott Filter”

by Robert M. de Jong and Neslihan Sakarya

Lemma 4: For any function $h : [0, 1] \rightarrow \mathbb{R}$,

$$\begin{aligned}
 & T^{-1} \sum_{j=2}^T \cos(\pi(j-1)m/T) h((j-1)/T) \tag{1} \\
 &= -(2T)^{-1} h(1/T) \\
 & - (2T)^{-1} (-1)^m h((T-1)/T) \\
 & - T^{-1} (2 \sin(\pi m/(2T)))^{-2} (h(2/T) - h(1/T)) \cos(\pi m/T) \\
 & + T^{-1} (2 \sin(\pi m/(2T)))^{-2} (h(1-1/T) - h(1-2/T)) \cos(\pi m(1-1/T)) \\
 & + T^{-1} (2 \sin(\pi m/(2T)))^{-3} \Delta^2 h(3/T) \sin(3\pi m/(2T)) \\
 & - T^{-1} (2 \sin(\pi m/(2T)))^{-3} \Delta^2 h(1-1/T) \sin(\pi m(T-3/2)/T) \\
 & + T^{-1} (2 \sin(\pi m/(2T)))^{-3} \sum_{j=2}^{T-3} \Delta^3 h((j+2)/T) \sin(\pi(j+1/2)m/T),
 \end{aligned}$$

and

$$\begin{aligned}
 & T^{-1} \sum_{j=1}^T \cos(\pi(j-1)(m-(1/2))/T) \cos(\pi(j-1)/(2T)) h((j-1)/T) \tag{2} \\
 &= (T)^{-1} h(0) - (2T)^{-1} h(1/T) \\
 & - (2T)^{-1} (h(2/T) - h(1/T)) \left\{ \frac{\cos(\pi m/T)}{(2 \sin(\pi m/(2T)))^2} + \frac{\cos(\pi(m-1)/T)}{(2 \sin(\pi(m-1)/(2T)))^2} \right\} \\
 & + (2T)^{-1} (h(1-1/T) - h(1-2/T)) \left\{ \frac{\cos(\pi m(1-1/T))}{(2 \sin(\pi m/(2T)))^2} + \frac{\cos(\pi(m-1)(1-1/T))}{(2 \sin(\pi(m-1)/(2T)))^2} \right\} \\
 & + (2T)^{-1} \Delta^2 h(3/T) \left\{ \frac{\sin(3\pi m/(2T))}{(2 \sin(\pi m/(2T)))^3} + \frac{\sin(3\pi(m-1)/(2T))}{(2 \sin(\pi(m-1)/(2T)))^3} \right\} \\
 & - (2T)^{-1} \Delta^2 h(1-1/T) \left\{ \frac{\sin(\pi m(T-3/2)/T)}{(2 \sin(\pi m/(2T)))^3} + \frac{\sin(\pi(m-1)(T-3/2)/T)}{(2 \sin(\pi(m-1)/(2T)))^3} \right\} \\
 & + (2T)^{-1} \sum_{j=2}^{T-3} \Delta^3 h((j+2)/T) \left\{ \frac{\sin(\pi(j+(1/2))m/T)}{(2 \sin(\pi m/(2T)))^3} + \frac{\sin(\pi(j+(1/2))(m-1)/T)}{(2 \sin(\pi(m-1)/(2T)))^3} \right\}.
 \end{aligned}$$

Proof of Lemma 4 First, consider the formula (1). Using the below trigonometric identities,

$$\sin(\alpha + \beta) = \sin(\alpha) \cos(\beta) + \sin(\beta) \cos(\alpha)$$

$$\sin(\alpha - \beta) = \sin(\alpha) \cos(\beta) - \sin(\beta) \cos(\alpha);$$

and by setting $\alpha = \pi(j - 1)m/T$ and $\beta = \pi m/(2T)$ we can write $\cos(\pi(j - 1)m/T)$ as

$$\cos(\pi(j - 1)m/T) = (2 \sin(\pi m/(2T)))^{-1} (\sin(\pi(j - 1/2)m/T) - \sin(\pi(j - 3/2)m/T)).$$

Therefore,

$$\begin{aligned} & T^{-1} \sum_{j=2}^T \cos(\pi(j - 1)m/T) h((j - 1)/T) \\ &= T^{-1} (2 \sin(\pi m/(2T)))^{-1} \sum_{j=2}^T h((j - 1)/T) (\sin(\pi(j - 1/2)m/T) - \sin(\pi(j - 3/2)m/T)), \end{aligned}$$

and because

$$\begin{aligned} \sum_{j=2}^T a_{j-1} (b_j - b_{j-1}) &= \sum_{j=2}^T a_{j-1} b_j - \sum_{j=2}^T a_{j-1} b_{j-1} \\ &= -a_1 b_1 + a_{T-1} b_T + \sum_{j=2}^{T-1} a_{j-1} b_j - \sum_{j=2}^{T-1} a_j b_j = -a_1 b_1 + a_{T-1} b_T - \sum_{j=2}^{T-1} (a_j - a_{j-1}) b_j, \end{aligned}$$

we now conclude that, setting $a_j = h(j/T)$ and $b_j = \sin(\pi(j - 1/2)m/T)$,

$$\begin{aligned} & T^{-1} \sum_{j=2}^T \cos(\pi(j - 1)m/T) h((j - 1)/T) \\ &= T^{-1} (2 \sin(\pi m/(2T)))^{-1} \sum_{j=2}^T (\sin(\pi(j - 1/2)m/T) - \sin(\pi(j - 3/2)m/T)) h((j - 1)/T) \\ &= -T^{-1} (2 \sin(\pi m/(2T)))^{-1} h(1/T) \sin(\pi m/(2T)) \\ &+ T^{-1} (2 \sin(\pi m/(2T)))^{-1} h((T - 1)/T) \sin(\pi(T - 1/2)m/T) \end{aligned}$$

$$-T^{-1}(2 \sin(\pi m/(2T)))^{-1} \sum_{j=2}^{T-1} (h(j/T) - h((j-1)/T)) \sin(\pi(j-1/2)m/T).$$

Next, using

$$\cos(\alpha - \beta) - \cos(\alpha + \beta) = 2 \sin(\beta) \sin(\alpha)$$

and setting $\alpha = \pi(j-1/2)m/T$ and $\beta = \pi m/(2T)$, it follows that

$$\sin(\pi(j-1/2)m/T) = (2 \sin(\pi m/(2T)))^{-1} (\cos(\pi(j-1)m/T) - \cos(\pi j m/T)),$$

so

$$\sum_{j=2}^{T-1} (h(j/T) - h((j-1)/T)) \sin(\pi(j-1/2)m/T) \tag{3}$$

$$= (2 \sin(\pi m/(2T)))^{-1} \sum_{j=2}^{T-1} (h(j/T) - h((j-1)/T)) (\cos(\pi(j-1)m/T) - \cos(\pi j m/T)).$$

Alternatively, using the below identity

$$\begin{aligned} \sum_{j=2}^{T-1} a_{j-1} (b_{j-1} - b_j) &= \sum_{j=2}^{T-1} a_{j-1} b_{j-1} - \sum_{j=2}^{T-1} a_{j-1} b_j \\ &= a_1 b_1 - a_{T-2} b_{T-1} + \sum_{j=2}^{T-2} a_j b_j - \sum_{j=2}^{T-2} a_{j-1} b_j = a_1 b_1 - a_{T-2} b_{T-1} + \sum_{j=2}^{T-2} (a_j - a_{j-1}) b_j, \end{aligned}$$

and setting $a_{j-1} = h(j/T) - h((j-1)/T)$, and $b_j = \cos(\pi j m/T)$, the equation (3) can be represented as

$$\begin{aligned} &(2 \sin(\pi m/(2T)))^{-1} (h(2/T) - h(1/T)) \cos(\pi m/T) \\ &- (2 \sin(\pi m/(2T)))^{-1} (h(1 - 1/T) - h(1 - 2/T)) \cos(\pi m(1 - 1/T)) \\ &+ (2 \sin(\pi m/(2T)))^{-1} \sum_{j=2}^{T-2} (h((j+1)/T) - 2h(j/T) + h((j-1)/T)) \cos(\pi j m/T) \end{aligned}$$

and therefore,

$$T^{-1} \sum_{j=2}^T \cos(\pi(j-1)m/T) h((j-1)/T)$$

$$\begin{aligned}
&= -T^{-1}(2 \sin(\pi m/(2T)))^{-1} h(1/T) \sin(\pi m/(2T)) \\
&+ T^{-1}(2 \sin(\pi m/(2T)))^{-1} h((T-1)/T) \sin(\pi(T-1/2)m/T) \\
&- T^{-1}(2 \sin(\pi m/(2T)))^{-1} \sum_{j=2}^{T-1} (h(j/T) - h((j-1)/T)) \sin(\pi(j-1/2)m/T) \\
&= -T^{-1}(2 \sin(\pi m/(2T)))^{-1} h(1/T) \sin(\pi m/(2T)) \\
&+ T^{-1}(2 \sin(\pi m/(2T)))^{-1} h((T-1)/T) \sin(\pi(T-1/2)m/T) \\
&- T^{-1}(2 \sin(\pi m/(2T)))^{-2} (h(2/T) - h(1/T)) \cos(\pi m/T) \\
&+ T^{-1}(2 \sin(\pi m/(2T)))^{-2} (h(1-1/T) - h(1-2/T)) \cos(\pi m(1-1/T)) \\
&- T^{-1}(2 \sin(\pi m/(2T)))^{-2} \sum_{j=2}^{T-2} (h((j+1)/T) - 2h(j/T) + h((j-1)/T)) \cos(\pi j m/T).
\end{aligned}$$

Using the identity $\sin(\alpha + \beta) - \sin(\alpha - \beta) = 2 \sin(\beta) \cos(\alpha)$ and setting $\alpha = \pi j m/T$ and $\beta = \pi m/(2T)$

$$\cos(\pi j m/T) = (2 \sin(\pi m/(2T)))^{-1} (\sin(\pi(j+1/2)m/T) - \sin(\pi(j-1/2)m/T))$$

Now, we can manipulate the following expression

$$\begin{aligned}
&\sum_{j=2}^{T-2} (h((j+1)/T) - 2h(j/T) + h((j-1)/T)) \cos(\pi j m/T) \\
&= (2 \sin(\pi m/(2T)))^{-1} \sum_{j=2}^{T-2} (h((j+1)/T) - 2h(j/T) + h((j-1)/T)) (\sin(\pi(j+1/2)m/T) - \sin(\pi(j-1/2)m/T)).
\end{aligned}$$

using the identity

$$\begin{aligned}
\sum_{j=2}^{T-2} a_{j-1} (b_j - b_{j-1}) &= \sum_{j=2}^{T-2} a_{j-1} b_j - \sum_{j=2}^{T-2} a_{j-1} b_{j-1} \\
&= -a_1 b_1 + a_{T-3} b_{T-2} - \sum_{j=2}^{T-3} (a_j - a_{j-1}) b_j,
\end{aligned}$$

by setting $a_{j-1} = h((j+1)/T) - 2h(j/T) + h((j-1)/T)$ and $b_j = \sin(\pi(j+1/2)m/T)$ we obtain

$$\begin{aligned}
& (2 \sin(\pi m/(2T)))^{-1} \sum_{j=2}^{T-2} (h((j+1)/T) - 2h(j/T) + h((j-1)/T)) (\sin(\pi(j+1/2)m/T) - \sin(\pi(j-1/2)m/T)) \\
&= -(2 \sin(\pi m/(2T)))^{-1} \Delta^2 h(3/T) \sin(3\pi m/(2T)) \\
&+ (2 \sin(\pi m/(2T)))^{-1} \Delta^2 h(1 - 1/T) \sin(\pi m(T - 3/2)/T) \\
&- (2 \sin(\pi m/(2T)))^{-1} \sum_{j=2}^{T-3} \Delta^3 h((j+2)/T) \sin(\pi(j+1/2)m/T),
\end{aligned}$$

where $\Delta^2 h((j+2)/T)$ is $h((j+2)/T) - 2h((j+1)/T) + h(j/T)$, and $\Delta^3 h((j+2)/T)$ is $h((j+2)/T) - 3h((j+1)/T) + 3h(j/T) - h((j-1)/T)$.

Therefore, noting that $\sin(\pi(T-1/2)m/T) = \sin(\pi m - \pi m/(2T)) = -\sin(\pi m/(2T)) \cos(\pi m) = (-1)^{m+1} \sin(\pi m/(2T))$,

$$\begin{aligned}
& T^{-1} \sum_{j=2}^T \cos(\pi(j-1)m/T) h((j-1)/T) \\
&= -T^{-1} (2 \sin(\pi m/(2T)))^{-1} h(1/T) \sin(\pi m/(2T)) \\
&+ T^{-1} (2 \sin(\pi m/(2T)))^{-1} h((T-1)/T) \sin(\pi(T-1/2)m/T) \\
&- T^{-1} (2 \sin(\pi m/(2T)))^{-2} (h(2/T) - h(1/T)) \cos(\pi m/T) \\
&+ T^{-1} (2 \sin(\pi m/(2T)))^{-2} (h(1-1/T) - h(1-2/T)) \cos(\pi m(1-1/T)) \\
&- T^{-1} (2 \sin(\pi m/(2T)))^{-2} \sum_{j=2}^{T-2} \Delta^2 h((j+1)/T) \cos(\pi j m/T) \\
&= -(2T)^{-1} h(1/T) - (2T)^{-1} (-1)^m h((T-1)/T) \\
&- T^{-1} (2 \sin(\pi m/(2T)))^{-2} (h(2/T) - h(1/T)) \cos(\pi m/T) \\
&+ T^{-1} (2 \sin(\pi m/(2T)))^{-2} (h(1-1/T) - h(1-2/T)) \cos(\pi m(1-1/T)) \\
&+ T^{-1} (2 \sin(\pi m/(2T)))^{-3} \Delta^2 h(3/T) \sin(3\pi m/(2T)) \\
&- T^{-1} (2 \sin(\pi m/(2T)))^{-3} \Delta^2 h(1-1/T) \sin(\pi m(T-3/2)/T)
\end{aligned}$$

$$+T^{-1}(2 \sin(\pi m/(2T)))^{-3} \sum_{j=2}^{T-3} \Delta^3 h((j+2)/T) \sin(\pi(j+1/2)m/T).$$

Note that for $h(r) = 1/(1 + 16\lambda \sin(\pi r/2)^4)$,

$$\begin{aligned} & T^{-1} \sum_{j=2}^T \cos(\pi(j-1)m/T) h((j-1)/T) \\ &= f_{T\lambda}(m) - (2T)^{-1} h(0) - (2T)^{-1} (-1)^m h(1) \\ &= f_{T\lambda}(m) - (2T)^{-1} - (2T)^{-1} (-1)^m (1 + 16\lambda)^{-1}. \end{aligned}$$

We proceed with deriving the Equation (2)

$$T^{-1} \sum_{j=1}^T \cos(\pi(j-1)(m - (1/2))/T) \cos(\pi(j-1)/(2T)) h((j-1)/T), \quad (4)$$

by using the trigonometric identity; $\cos(\alpha) \cos(\beta) = \cos(\alpha + \beta) + \sin(\alpha) \sin(\beta)$ and setting $\alpha = \pi(j-1)(m - (1/2))/T$ and $\beta = \pi(j-1)/(2T)$. We obtain

$$\begin{aligned} & \cos(\pi(j-1)(m - (1/2))/T) \cos(\pi(j-1)/(2T)) \\ &= \cos(\pi(j-1)m/T) + \sin(\pi(j-1)(m - (1/2))/T) \sin(\pi(j-1)/(2T)). \end{aligned}$$

Now the Equation (4) is

$$\begin{aligned} & \frac{1}{T} \sum_{j=1}^T \cos(\pi(j-1)m/T) h((j-1)/T) \\ &+ \frac{1}{T} \sum_{j=1}^T \sin(\pi(j-1)(m - (1/2))/T) \sin(\pi(j-1)/(2T)) h((j-1)/T). \end{aligned} \quad (5)$$

Additionally, the expression (5) can be simplified by using the identity $\sin(\alpha) \sin(\beta) = (\cos(\alpha - \beta) - \cos(\alpha + \beta))/2$ and setting $\alpha = \pi(j-1)(m - (1/2))/T$ and $\beta = \pi(j-1)/(2T)$. Therefore,

$$\begin{aligned} & \sin(\pi(j-1)(m - (1/2))/T) \sin(\pi(j-1)/(2T)) \\ &= \frac{1}{2} (\cos(\pi(j-1)(m-1)/T) - \cos(\pi(j-1)m/T)). \end{aligned}$$

Plugging this result back into the expression (5), we have

$$\begin{aligned}
& T^{-1} \sum_{j=1}^T \cos(\pi(j-1)(m - (1/2))/T) \cos(\pi(j-1)/(2T)) h((j-1)/T) \\
&= (2T)^{-1} \sum_{j=1}^T \cos(\pi(j-1)m/T) h((j-1)/T) \tag{6}
\end{aligned}$$

$$\begin{aligned}
& + (2T)^{-1} \sum_{j=1}^T \cos(\pi(j-1)(m-1)/T) h((j-1)/T). \tag{7}
\end{aligned}$$

The third order difference formulation for the expressions (6) and (7) are already derived in the Equation (1). Therefore, it follows that

$$\begin{aligned}
& (2T)^{-1} \sum_{j=1}^T \cos(\pi(j-1)m/T) h((j-1)/T) \\
&= (2T)^{-1} h(0) + (2T)^{-1} \sum_{j=2}^T \cos(\pi(j-1)m/T) h((j-1)/T) \\
&= (2T)^{-1} h(0) - (4T)^{-1} h(1/T) - (4T)^{-1} (-1)^m h((T-1)/T) \\
&\quad - (2T)^{-1} (2 \sin(\pi m/(2T)))^{-2} (h(2/T) - h(1/T)) \cos(\pi m/T) \\
&\quad + (2T)^{-1} (2 \sin(\pi m/(2T)))^{-2} (h(1-1/T) - h(1-2/T)) \cos(\pi m(1-1/T)) \\
&\quad + (2T)^{-1} (2 \sin(\pi m/(2T)))^{-3} \Delta^2 h(3/T) \sin(3\pi m/(2T)) \\
&\quad - (2T)^{-1} (2 \sin(\pi m/(2T)))^{-3} \Delta^2 h(1-1/T) \sin(\pi m(T-3/2)/T) \\
&\quad + (2T)^{-1} (2 \sin(\pi m/(2T)))^{-3} \sum_{j=2}^{T-3} \Delta^3 h((j+2)/T) \sin(\pi(j+1/2)m/T).
\end{aligned}$$

Similarly, the third order difference formulation for the expression (7) is obtained from the Equation (1)

$$(2T)^{-1} \sum_{j=1}^T \cos(\pi(j-1)(m-1)/T) h((j-1)/T)$$

$$\begin{aligned}
&= (2T)^{-1}h(0) - (4T)^{-1}h(1/T) - (4T)^{-1}(-1)^{(m-1)}h((T-1)/T) \\
&\quad - (2T)^{-1}(2\sin(\pi(m-1)/(2T)))^{-2}(h(2/T) - h(1/T))\cos(\pi(m-1)/T) \\
&\quad + (2T)^{-1}(2\sin(\pi(m-1)/(2T)))^{-2}(h(1-1/T) - h(1-2/T))\cos(\pi(m-1)(1-1/T)) \\
&\quad + (2T)^{-1}(2\sin(\pi(m-1)/(2T)))^{-3}\Delta^2h(3/T)\sin(3\pi(m-1)/(2T)) \\
&\quad - (2T)^{-1}(2\sin(\pi(m-1)/(2T)))^{-3}\Delta^2h(1-1/T)\sin(\pi(m-1)(T-3/2)/T) \\
&\quad + (2T)^{-1}(2\sin(\pi(m-1)/(2T)))^{-3}\sum_{j=2}^{T-3}\Delta^3h((j+2)/T)\sin(\pi(j+1/2)(m-1)/T).
\end{aligned}$$

Thus, the third order difference formulation for the expression (2) is

$$\begin{aligned}
&T^{-1}\sum_{j=1}^T\cos(\pi(j-1)(m-(1/2))/T)\cos(\pi(j-1)/(2T))h((j-1)/T) \\
&= (2T)^{-1}\sum_{j=1}^T\cos(\pi(j-1)m/T)h((j-1)/T) + (2T)^{-1}\sum_{j=1}^T\cos(\pi(j-1)(m-1)/T)h((j-1)/T) \\
&= (T)^{-1}h(0) - (2T)^{-1}h(1/T) \\
&\quad - (2T)^{-1}(h(2/T) - h(1/T))\left\{\frac{\cos(\pi m/T)}{(2\sin(\pi m/(2T)))^2} + \frac{\cos(\pi(m-1)/T)}{(2\sin(\pi(m-1)/(2T)))^2}\right\} \\
&\quad + (2T)^{-1}(h(1-1/T) - h(1-2/T))\left\{\frac{\cos(\pi m(1-1/T))}{(2\sin(\pi m/(2T)))^2} + \frac{\cos(\pi(m-1)(1-1/T))}{(2\sin(\pi(m-1)/(2T)))^2}\right\} \\
&\quad + (2T)^{-1}\Delta^2h(3/T)\left\{\frac{\sin(3\pi m/(2T))}{(2\sin(\pi m/(2T)))^3} + \frac{\sin(3\pi(m-1)/(2T))}{(2\sin(\pi(m-1)/(2T)))^3}\right\} \\
&\quad - (2T)^{-1}\Delta^2h(1-1/T)\left\{\frac{\sin(\pi m(T-3/2)/T)}{(2\sin(\pi m/(2T)))^3} + \frac{\sin(\pi(m-1)(T-3/2)/T)}{(2\sin(\pi(m-1)/(2T)))^3}\right\} \\
&\quad + (2T)^{-1}\sum_{j=2}^{T-3}\Delta^3h((j+2)/T)\left\{\frac{\sin(\pi(j+(1/2))m/T)}{(2\sin(\pi m/(2T)))^3} + \frac{\sin(\pi(j+(1/2))(m-1)/T)}{(2\sin(\pi(m-1)/(2T)))^3}\right\}.
\end{aligned}$$

Note that for $h((j-1)/T) = \sin(\pi(j-1)/(2T))^2/(1+16\lambda\sin(\pi(j-1)/(2T))^4)$ and for $m \geq 2$ we have

$$g_{T,\lambda}(m) = \sqrt{2}T^{-1}\sum_{j=1}^T\cos(\pi(j-1)(m-(1/2))/T)\cos(\pi(j-1)/(2T))h((j-1)/T)$$

$$\begin{aligned}
&= -\frac{\sqrt{2}}{2T}(h(1/T) - h(0)) \\
&\quad -\frac{\sqrt{2}}{2T}(h(2/T) - h(1/T)) \left\{ \frac{\cos(\pi m/T)}{(2 \sin(\pi m/(2T)))^2} + \frac{\cos(\pi(m-1)/T)}{(2 \sin(\pi(m-1)/(2T)))^2} \right\} \\
&\quad +\frac{\sqrt{2}}{2T}(h(1-1/T) - h(1-2/T)) \left\{ \frac{\cos(\pi m(1-1/T))}{(2 \sin(\pi m/(2T)))^2} + \frac{\cos(\pi(m-1)(1-1/T))}{(2 \sin(\pi(m-1)/(2T)))^2} \right\} \\
&\quad +\frac{\sqrt{2}}{2T}\Delta^2 h(3/T) \left\{ \frac{\sin(3\pi m/(2T))}{2^3 \sin(\pi m/(2T))^3} + \frac{\sin(3\pi(m-1)/(2T))}{2^3 \sin(\pi(m-1)/(2T))^3} \right\} \\
&\quad -\frac{\sqrt{2}}{2T}\Delta^2 h(1-1/T) \left\{ \frac{\sin(\pi m(T-3/2)/T)}{(2 \sin(\pi m/(2T)))^3} + \frac{\sin(\pi(m-1)(T-3/2)/T)}{(2 \sin(\pi(m-1)/(2T)))^3} \right\} \\
&\quad +\frac{\sqrt{2}}{2T} \sum_{j=2}^{T-3} \Delta^3 h((j+2)/T) \left\{ \frac{\sin(\pi(j+(1/2))m/T)}{(2 \sin(\pi m/(2T)))^3} + \frac{\sin(\pi(j+(1/2))(m-1)/T)}{(2 \sin(\pi(m-1)/(2T)))^3} \right\},
\end{aligned}$$

where $h(0) = 0$.

Note: My conjecture is that we could find a bound for $|f_{T,\lambda}(m)| \leq Cm^{-5}$ for $m \in \{1, 2, \dots, T\}$ as long as $\sup_{r \in [0,1]} |h^{iv}(r)| < \infty$ where $h(r) = (1 + 16\lambda \sin(\pi r/2))$. Note that $h'(0) = h''(0) = h'''(0) = 0$, but $h^{iv}(0) \neq 0$. Additionally, $h'(1) = h''(1) = 0$, but $h'''(1) = 16\pi^2\lambda(1 + 16\lambda)^{-2}$. ($h^i(1) = 0$ when i is odd)
